Summary			
<p>Novell NMAS is a suited way to offer multiple authentication methods throughout your network. In combination with Ichain, which represents reverse proxying and BorderManager providing Proxy and VPN services, you can setup a mix of authentication procedures. Novell NMAS has the Vasco authentication mechanism integrated.</p> <p>This allows users to log on with a One Time password, generated by the Digipass, to an Ichain portal, a VPN session, and Win32 Novell client. Vasco provides a Plug-In which extends the NMAS . With Console One, the Novell administrator manages users and Digipass at once.</p>			
Supported partner products			
<ul style="list-style-type: none"> <input checked="" type="checkbox"/> Novell NMAS – versions 2.0,2.1,2.2,2.3 <input checked="" type="checkbox"/> NMAS Client – versions 2.2,2.3,2.7 <input checked="" type="checkbox"/> Novell Client 32 – all versions <input checked="" type="checkbox"/> Novell Ichain – versions 2.0, 2.1, 2.2,2.3 <input checked="" type="checkbox"/> Novell BorderManager – versions 3.7, 3.8 			
Required VASCO products

Remarks			
<p>* Digipass GO1 and GO3 support 2-factor authentication by requiring the user to add a static PIN to the One Time Password. This PIN is entered in the same field as the One Time Password.</p> <p>Note: Vasco also offers the Vacman Radius Middleware. This is Vasco's RADIUS Authentication solution. Vacman Radius Middleware can be an option when there is need for Radius and Web (OWA/Citrix portals...) authentication in Mixed OS environments.</p>
