

DIGIPASS[®] basic pack SPS

Secure PASSWORD Storage

Your strong authentication solution for network access

Users who need to authenticate themselves to operating systems, servers, secure application programs, protected websites and portals need DIGIPASS basic pack SPS. It is an authentication solution that simplifies users' network authentication while providing added security. DIGIPASS basic pack SPS uses highly secure DIGIPASS smart authentication software which is user friendly and extremely easy to deploy.

STRONG DIGIPASS AUTHENTICATION

DIGIPASS basic pack is a security software solution that provides two factor authentication based on strong static passwords stored securely on smart cards. DIGIPASS basic pack replaces the single-factor login sequence of typing username and password with a proven security technology: strong two-factor authentication. The DIGIPASS solution requires authorized users to demonstrate that they possess both the DIGIPASS smart cards (by inserting the smart card into the smart card reader) and that they know a secret - a unique PIN-code. This two-factor authentication technology works perfectly with e.g. Windows[®] operating systems.

NO PROGRAMMING NEEDED

DIGIPASS basic pack is easily installed and integrated with your existing IT and authentication infrastructure. It does not replace or change underlying functionality but simply adds two-factor authentication to your regular authentication procedures. No special programming is required in any case. There is no need to create new user accounts ensuring the lowest administrative costs, hence the lowest Total Cost of Ownership.

OUTSTANDING VERSATILITY, UNMATCHED EASE

DIGIPASS basic pack SPS incorporates the Smart Authentication Suite that allows strong static password authentication to Windows[®] operating systems, Citrix[®] Metaframe environments (DP Add-On pack required), Windows Terminal Server environments (DP Add-On pack required), to any application that requires username/password authentication (DP Add-On pack required), and to any protected web page or portal (DP Add-On pack required).

FUNCTIONS

- Two-Factor Logon to Windows Operating Systems
- With DP add-on packs, two-factor Logon to Citrix Metaframe, Windows Terminal Servers, Windows applications, websites and portals is additionally supported

FEATURES

- Strong DIGIPASS based two-factor authentication based on card and PIN
 - Works on Windows GINA for network and local IT access
 - Smart Card based SSO (Single-Sign-On)
 - Works on connected and disconnected PC the same way
 - Universally applicable; secures also applications and web sites (*)
 - Configurable behaviour on card removal, including "lock workstation", "user log off", and "system shut down".
 - Multiple logon profiles on one card
 - Low set-up and support costs and no integration costs saves time and money
 - Minimal roll-out administration - user credentials automatically gathered and synchronized at first login.
 - Full support of Microsoft[®] Terminal Server environments including session roaming (*)
 - Automatic start and logon to one or more terminal sessions. (*)
 - Configurable video and audio settings for every server connection (*)
 - HTTP authentication for web logon (*)
 - Support of sequential logons (*)
 - Application Logon provides built-in support for many standard applications including Windows Messenger, Remote Desktop Connection Client, Lotus Notes 5, Microsoft Office, PGP, and WinZip (*)
 - Versatile Macro recorder in Application Logon to learn keyboard and mouse events for complex logon procedures (e.g. SAP GUI) (*)
- Supports strong passwords with 'Salt and Pepper' characters sequences also containing non-alphanumeric characters.

(with DP add-on packs)

BENEFITS

- Strong Digipass two-factor authentication assures your users identities
- No more passwords to remember - no more passwords on sticky notes
- No more hassle with regular password changes
- Designed to fit the needs of small and medium sized companies
- 'Out-of-the-box' solution
- Easy to integrate, administer and audit
- Seamless solution; easy to use
- Session Roaming - fast and efficient change of workstations carrying your Windows Terminal Server session and hence your working environment along
- Reduces administrative costs by reducing lost / forgotten password support
- Low set-up and support costs and no integration costs save time and money
- Extremely low 'total cost of ownership'
- ROI less then 6 months

COMPLIANCE TO STANDARDS

Smart Cards	ISO 7816
-------------	----------

SYSTEM REQUIREMENTS

Operating System	<ul style="list-style-type: none"> • Windows 2000 / XP • Windows Server 2000 / 2003
Processor	Pentium 500 MHz or faster
Memory	Minimum RAM capacity of 512 MB
Disk Space	Minimum disk space of 100 MB

THE PRODUCT / PACK CONTENTS

DIGIPASS basic pack SPS is available in two options: USB or PCMCIA. It is delivered in a box comprising 5 units of DP 905 (option USB) or 5 units of Ominkey CM4040 (option PCMCIA), 5 DIGIPASS smart cards, 5 end user licenses for DP Windows Logon, Software installation CD, a quick installation manual, one year of software maintenance and support services.

AVAILABLE DIGIPASS ADD-ON PACKS

- DIGIPASS add-on pack Citrix Metaframe Logon: contains 5 end user licenses for DP for Citrix Metaframe Logon, one year of software maintenance and support services
- DIGIPASS add-on pack Windows Terminal Server Logon: contains 5 end user licenses for DP for Windows Terminal Server Logon, one year of software maintenance and support services
- DIGIPASS add-on pack Application Logon: contains 5 end user licenses for DP for Application Logon, one year of software maintenance and support services
- DIGIPASS add-on pack Web Logon: contains 5 end user licenses for DP for Web Logon, one year of software maintenance and support services
- DIGIPASS add-on pack e-Signing: contains 5 end user licenses for DP for client e-Signing, one year of software maintenance and support services

About VASCO

VASCO is the number one supplier of strong authentication and e-signature solutions and services.
