

CYBER SECURITY
SERVICES

High level protection for the health service

Cyber security is critical for the future of the NHS

The NHS is a constant target for cyber-criminals. Not only because of the volume of personal and sensitive data that it holds, but also the significant impact that bringing health authorities to a stand-still has on the wider community.

Never more so than now, has the value of the NHS really been felt. Amid this current pandemic, it is vital that the NHS continues to operate at full capacity, so knowing that your IT systems are well protected is a primary concern.

"It is critically important that the NHS and social care remain resilient to cyber-attacks during this period of COVID-19 response" – statement from NHS Digital

We work with a number of health authorities providing them with reassurance through the delivery of world-class security technologies including Palo Alto, Microsoft, Kaspersky, VMware Carbon Black among others.

All our solutions are designed around your current services to centralise alerts and activity into a single location. We also provide full proof of concept for all proposed solutions.

At a glance

- ✓ Central point of security
- ✓ Flexible and scalable, tailored solutions
- ✓ Proactive approach to threats
- ✓ Access to extensive threat intel
- ✓ Fast, SLA-based support

Why CyberGuard?

CyberGuard's CREST accredited security consultants and analysts are highly experienced and work with global threat intelligence feeds to ensure all our security services are ready to protect against the latest, evolving threats. We have experience of working with a range of organisations across the public sector, including NHS Trusts, local Councils and education providers and understand the specific needs of the sector.

Every organisation is different and that is why we work closely with our customers to design and implement a suite of services that best meet your needs. These include:

- ✔ Managed SIEM
- ✔ Managed Detect and Respond
- ✔ Managed Firewalls
- ✔ Office 365 Advanced Threat Protection
- ✔ SOC Support

A recent NHS Trust project:

Initially we setup a critical Incident Response service for the Trust. This allowed our SOC Team to investigate, react and remediate any threats at the source. This provides the customer with a reactive service that they can call upon in the event of a cyber-incident.

The second phase of the project was designed to improve the communication between all existing security products. Utilising their current methods, we created a SIEM (Security Information & Event Management) solution whereby all security products communicate and send alerts to a centralised location. This provides us with a clearer picture of any potential threats to the Trust and removes any duplication of checking the same threat picked up on multiple defences.

CyberGuard provides a fully managed service and works seamlessly alongside internal IT teams providing added resource, reassurance and expertise as required. Our teams provide a proactive service monitoring alerts, patch updates and policy changes which are reviewed and implemented as agreed with the Trust.

Each project is tailored to provide the services and specialist resource as required by the customer. Whilst we have access to an extensive team of experts, we pride ourselves on maintaining a personal level of service with small teams assigned to individual customers to provide continuity and an in-depth knowledge of the customer's own infrastructure and internal setup.

Don't just take our word for it...

“ As a Trust we have been very impressed with CyberGuard's knowledge, response and proactivity. While this has only been in place for a short period of time, we have full confidence that our security has been strengthened and will continue to be on the forefront. ”
