

WAREHOUSE
MANAGEMENT

Gain control of your warehouse
with prof.ITplus

Maximise your expensive storage space
for optimum stock turn

prof.ITplus can be used to revolutionise storage space – whether a small stock room or a network of multi-location warehouses - by putting in place a best practice structure which will strip away inefficiency, duplication and human error. In their place you gain control, visibility and excellent warehousing procedures that make your operation slick and effective.

Stock storage spaces can be organised so that restocking, picking, packing and despatching are smooth procedures, structured by bin location.

All documentation produced by prof.ITplus includes details of bin locations, so whether your staff are restocking or picking they will do so in the most efficient manner. prof.ITplus will generate picking notes in bin sequence, reducing the steps walked by your pickers which means more orders are picked in a day and your customers get their goods sooner.

At a glance

- Suitable for all warehouse sizes and types
- Structures a warehouse for optimum stock turn
- Streamlined restocking, picking, packing & despatching
- Improved customer service
- Fully integrated with all other business processes

Transform your warehouse or stock room into a streamlined, efficient operation

Give your warehouse staff full visibility of sales and purchase orders

Too many warehouse staff are ill-informed when dealing with incoming deliveries. Our system shows when orders are expected, who from and most importantly, what is for stock, what is for customer orders (back-to-back purchase order) and what is for works orders. For businesses without proper warehousing software, this process of sorting out deliveries alone can take a huge amount of time each day.

Boost your team's productivity

Our system allows warehouse staff to work in a well-managed environment and to be effective, efficient and to meet realistic targets. prof.ITplus makes the work of warehouse staff infinitely more manageable. prof.ITplus will generate picking notes in bin sequence which will save warehouse staff many steps and will contribute significantly to their overall performance.

The full integration of the warehouse management module with the rest of the system gives staff full visibility of all the activities across the business, including sales orders, purchasing and returns which directly impact the warehouse.

Like what you're reading ?

Our friendly team can advise you on the suitability of prof.ITplus for your business with just a few simple questions. After that we'd be delighted to show you prof.ITplus and would be more than happy to come along to your premises for an informal meeting.

Get in touch and we can arrange a demonstration for you so you can see the features and functions for yourself.

Don't just take our word for it...

“ Warehouse Management has really quickened our picking process and the scanners are universal; anyone can use them. It's not unusual for a member of staff to pick in excess of 1,000 products a week; before we started using prof.ITplus we picked nowhere near those numbers. ”

Simon Oakley, IT Manager
Embrass Peerless, Solihull
