

**Raising visibility,
managing threats**

**Managed cyber security services,
delivered by experts**

The threat is real; the impact is severe

Our cyber security team provides the very best in IT security for businesses across the UK looking for premium IT performance in a protected, secure environment.

Our cyber defences protect businesses from the potential devastation of an attack from cyber criminals. That includes defending your finances, your identity, your reputation, your data and your customers' confidential information.

In today's business world, organisations must protect against a myriad of constantly changing attack methods, including hijacked systems, stolen credentials, rogue insiders, ransomware, malware, CEO fraud and compliance failure. Not to mention employee ignorance which can lead to unintentional security breaches.

Our team is highly qualified and experienced and has access to the very latest in threat protection products. It is our business to continually research and understand the ever-changing nature of the dark web and build the toughest defences around the businesses we protect.

At a glance

- ✓ Comprehensive security-testing services
- ✓ Fully-managed detect & respond services
- ✓ Effective staff education & training
- ✓ Cyber Essentials / IASME Gold certification & compliance
- ✓ Ongoing access to cyber security expertise

Protect your business: its money, identity, reputation & data

Security Testing

Detect & Respond

Security Awareness Education

Certification

Security Testing

Pinpoint your vulnerabilities before attackers do.

- ✔ Vulnerability Testing
- ✔ Penetration Testing
- ✔ Wireless Testing

Testing is where building any sound cyber defence should start. Once you've commissioned CyberGuard to protect your business, we'll assess your organisation and carry out the relevant testing to ascertain your current risks and weaknesses. Once we have the test results, our experts have a point from which to begin work. Our cyber experts will analyse all the test results and compile a comprehensive report of the findings.

Detect & Respond

Pass responsibility for your cyber security to experts.

- ✔ Unified Security Manager
- ✔ Advanced Threat Protection
- ✔ Managed Firewall

We'll form a set of recommendations based on our testing report which will utilise our portfolio of Detect & Respond services. The recommendations will result in a strong, resilient cyber defence and form the backbone of your new cyber security strategy.

Once you're happy, we'll set about implementing your new products and services, whether that's our state-of-the-art Unified Security Manager or a more simple Managed Firewall.

Security Awareness Education

Staff training on the principles of cyber safety using fun & engaging methods!

- ✔ Security Awareness Training
- ✔ Phishing Campaigns
- ✔ Password Security Checker

The next step is to get your employees up to speed about cyber security in the workplace and ensure they understand the role they have to play in maintaining your company's protection. Our Security Awareness Training programme, delivered by one of our cyber experts, covers all the key points, using a range of techniques to engage and motivate your staff to work using best practise methods.

Certification

Baseline cyber security for all businesses.

- ✔ Cyber Essentials
- ✔ Cyber Essentials Plus
- ✔ IASME Gold

Finally, we recommend that all our customers gain Cyber Essentials and/or IASME Gold. The Cyber Essentials scheme provides a framework of the baseline protection that all businesses in the UK should have in place to keep themselves secure. It's the best way to show your customers, suppliers, investors and stakeholders that you take cyber security seriously and you have the recommended measures in place.

Why take cyber-crime seriously...

“ Cyber-crime is fast becoming a threat to all businesses, not just large institutions. That's why CyberGuard was set up to help typical UK businesses, of all sizes, move from a reactive to proactive approach to protecting themselves. Utilising the latest technologies, we give our customers visibility of what's happening on their network and take action to reduce the risk of attack. ”

Paul Colwell, Technical Director
CyberGuard Technologies

Reasons to choose a cyber specialist

- ❖ The UK Government has committed to investing £1.9bn in cyber security over the next 5 years and whilst 69% of businesses say cyber security is a high priority for senior managers, only 51% have taken the recommended actions to identify their cyber risk.
- ❖ The introduction of GDPR in 2018 - the biggest shake up in Data Protection Law for twenty years - requires you to take steps to protect your business and report any breaches within 72 hours.
- ❖ A typical IT provider will only be able to provide you with the basic levels of security which, in our experience, does not go far enough to safeguard your business against the more sophisticated cyber attacks.
- ❖ In the last year, 65% of large companies in the UK detected a cyber security breach or attack with the average cost to a business being £36,500.

Working in partnership with OGL Computer:

OGL's services include:

IT Solutions

- IT Support
- Cloud Computing
- Disaster Recovery & Backup
- IT Security
- Data Storage & Sharing
