

**STOCK
MANAGEMENT**

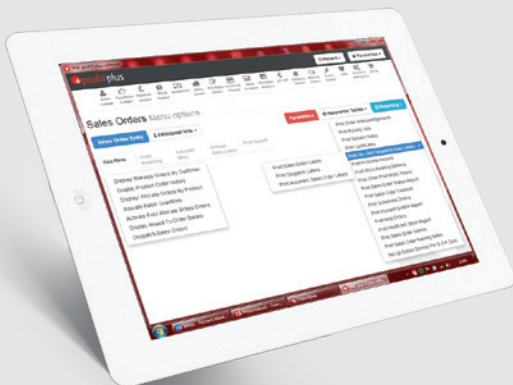

**Enable accurate, quick, efficient
management of your stock**

Optimum stock levels managed for you

No doubt you want your company to be known for excellent service. For that you'll need a firm grip on the management of your stock so you can deliver what your customers want, when they want it. Customer expectations are high these days so to remain competitive it's important that stock management is a priority.

Using barcode scanning technology, prof.ITplus takes control of your stock and provides total visibility. You'll be able to track stock movements, including purchases, returns and relocations, view product availability and identify bin locations at a glance. You'll have complete access to your stock profile in real-time, at any time.

The Stock Management module drives efficiency up. No more stockpiling of slow moving, expensive stock that occupies valuable warehouse space. prof.ITplus will use historic data, sales forecasts and seasonal trends to identify minimum, maximum and optimum stock levels for each product.

At a glance

- Take control of your stock
- Deliver excellent service and product availability
- Eliminate time-consuming manual stock checks
- Record all stock movements using barcode scanners
- Minimum, maximum and optimum stock levels

Manage your stock with profit in mind

Sophisticated automation prevents profit sitting in dead stock

Stock Management within prof.ITplus is, as you would expect, fully integrated with all other aspects of the system and is designed with profit maximisation in mind.

Powerful reporting in the stock screens allow you to make fully informed decisions about your business and stock levels. Use prof.ITplus to ensure you're not investing unnecessarily in stock. Only buy what prof.ITplus reports will sell quickly. A few clicks of the mouse will reveal your fast moving, highly profitable goods; these are the ones to buy in bulk for greater margins – prof.ITplus will pinpoint them for you.

Stock-taking made easy

Don't allow stock-taking to cause you a headache

prof.ITplus supports a perpetual stock-taking system whereby a section of stock is counted and tracked every week. The perpetual stock-take or 'rolling stock-take' may take a few employees only an hour a week and thus it means at any one moment in time the business has a good level of accuracy about its stock valuation. When year-end arrives, there is no need for the headache of counting every item of stock in one go as all stock has already been counted in recent months as part of the perpetual system.

Don't just take our word for it...

“ prof.ITplus tracks stock brilliantly, I can put anything in the warehouse and I know immediately where it is, which is all down to the system. It's so simple and it's the simple things that make all the difference. ”

Embrass Peerless, Solihull

ROAD - Mobile App

A new mobile app that enables your field-based staff to check stock levels, replenish stock bins and create orders remotely. The app can be used both on or offline, and will automatically sync with prof.ITplus later delivering greater efficiency for your staff.

- Scan barcodes for quick product identification
- Customer pricing and stock levels visible from prof.ITplus
- Work on and offline, sync to prof.ITplus later
- Fully integrated with prof.ITplus
