

DISASTER RECOVERY & BACKUP

Can you afford to be unprotected?

DATA RECOVERY

Solutions that provide high availability, data protection and business continuity

However unlikely the possibility of a disaster, such as a fire, flood or theft, can you afford to risk losing any of the following types of data:

- ✔ Current and historical customer orders
- ✔ Customer details, account and contact information
- ✔ Stock records, project information or case notes
- ✔ Accountancy documentation
- ✔ Employee records and payroll information

In this day and age, it's imperative to protect your business – namely your data – from the consequences of a fire, flood, theft or other disaster by backing up your systems and deploying a disaster recovery strategy.

We all know data needs to be backed up but the complexity of data and applications can make it a daunting task. However without a robust strategy in place, if you do suffer a major disaster, or a significant system failure, not having reliable and accessible backups in place could result in irrecoverable damage to your business.

At a glance

- ✔ Protect your business from disaster
- ✔ Utilise the cloud for essential backups
- ✔ High availability from any location
- ✔ Business continuity taken care of
- ✔ All adhering to data protection laws

The right solution available for you

Our experts will advise you which of our solutions will suit your business and its requirements best:

Cloud Recovery

Suited to businesses that need assurance, in the event of a disaster, key workers will be able to access all mission-critical data, operating systems, IT applications and their settings, plus email as normal from any internet connection within a maximum period of 24 hours.

Cloud Virtual Replication

Best suited to businesses that rely on real-time availability of your data and cannot afford to lose any data or have your systems down for even a few minutes. A fully managed service offering recovery of just a few seconds.

Cloud Desktop

OGL's Cloud Desktop product (also known as 'virtual desktop', 'VDI' or 'hosted desktop') has inherent disaster recovery and backup features, as well as a host of other accessibility, cost and security benefits. A great all-encompassing solution for companies who suit the benefits of taking all their computing requirements into the cloud.

Cloud Virtual Recovery

Created for businesses that run virtual servers using VMware or Hyper-V solutions.

Onsite Recovery

In some situations cloud-based disaster recovery solutions aren't suitable or, in some cases, businesses express a desire to keep all of their data on-site. In that case we can discuss on-premise solutions with you.

"It won't happen to me"

We certainly hope it won't but experience tells us that businesses do suffer from totally unpredicted incidents that cause significant disruption because access to data and systems is lost with no quick and easy way to restore them.

Our enviable portfolio of Disaster Recovery & Backup products – cloud-based and onsite - means there is a solution that will be suitable, and not to mention cost-effective, for your business.

Don't just take our word for it...

“ OGL provided exactly what they said they would and remote access to our data within 24 hours was very important to Danfast's survival as a going concern. ”

Danfast, Hull
