

DATA STORAGE & SHARING

Store your business's lifeblood securely

Cloud or on-site solutions to give you peace of mind

Storing data in a secure, yet accessible, way is a headache for many businesses we speak to. Your data needs to be safe, yet you also need access to it from the office and maybe from remote locations too. And you also need the ability to share it with colleagues.

Outsourcing your data storage to OGL Computer means you will know your data is kept safe and secure and you will benefit from the utmost of security measures and backup options.

Information requiring storage includes emails, documents, presentations, databases, graphics, images, audio / video files and spreadsheets. Together with the applications that run your business, these are the lifeblood of most businesses. They require a lot of storage space and every day your business will be generating even more data that needs storing.

“ By 2020, about 1.7 megabytes of new information will be created every second for every human being on the planet ”

At a glance

- ✓ Top up capacity as your business demands it
- ✓ Improved operational efficiency
- ✓ Increased security, accessibility and protection
- ✓ Increased performance for your staff
- ✓ Delivered by IT experts

Cloud or on-site storage?

Find the perfect storage solution for your business

Whether your business requires an all-encompassing data backup solution, instant access to files away from the office or, more simply, a way to safely store and share documents with colleagues and customers, we have a solution to meet your needs.

We'll discuss your business, and the type of data you're dealing with, and recommend a solution to fit. Options include on-site storage at your premises or perhaps you'd like to consider storing some, or all, of your data at our data centre, utilising the latest cloud technology. Or, after discussing your business needs, it may be that a mix of traditional on-site services alongside leading-edge cloud technologies would be the best fit for you.

Don't just take our word for it...

“ You forget how much you rely on computers; we, like everyone else, rely on them 100%. At a critical time for our business OGL went above and beyond to help us get up and running again. We soon realised that not every IT company would have been that dedicated in getting us operational again. OGL rallied round and did everything they could and we soon realised that they weren't your everyday IT company.”

Patrico, Tewkesbury

Managing the data explosion

274 million files backed up every single night.

Over the last 20 years there has been an explosion in the volume of data that is being created and how it is stored and backed up remains the single biggest issue for those responsible for workplace IT.

At OGL we have developed an enviable portfolio of data storage and sharing solutions to meet the needs of any business; whether you need a simple archive to refer back to or require real-time replication of your data.

It is becoming increasingly common for businesses to outsource their

data storage. Even a relatively small company could have 500GB (half a terabyte) of data to store and back up, not cheap to do on your own hardware. Turning to an IT provider means you get the very best of storage solutions available to you, without making the hardware investment yourself.

Currently, we back up around 274 million files every single night for our customers, which equates to around 1 million gigabytes of data stored. So, to say we know what we're doing is an understatement!
