

 IT INFRASTRUCTURE

Simplify your infrastructure by outsourcing to experts

Gain business flexibility, efficiency and scalability with a managed infrastructure

Managing the IT infrastructure of your business in-house, especially a growing one with developing needs, is a complex task that can swallow up serious time, money and resource.

Perhaps it's time to consider outsourcing the management of your infrastructure to free up your internal resources. You'll gain the value of our very talented IT specialists and state-of-the-art resources.

At OGL we'll evaluate your requirements to design and provide a flexible, more cost-effective network solution that is a perfect fit with your organisational needs.

Outsourcing the design, implementation and management of your infrastructure involves you placing a significant amount of trust in your chosen IT partner. After all, your IT infrastructure is what allows your business to operate.

At OGL we have many very talented individuals, making up multi-skilled, vastly experienced technical teams who really understand what it takes to build and implement secure, reliable, resilient infrastructures, tailored to your needs.

At a glance

-  Onsite, cloud or hybrid solutions
-  Reliable, agile and stable infrastructures
-  Gain flexibility to add / remove services as needed
-  Keep your business running and anticipate problems
-  Updates, administration & security all taken care of

Infrastructure types

IT excellency tailored to your business and employees

Client / server computing

A client / server infrastructure is a network which consists of one centralised, powerful computer (the server) with many less powerful, personal computers (the clients) connected to it. The clients run programs, applications and access data that are stored on the server. In some cases there may be several servers, for example: file servers, print servers, application servers, database servers, mail servers and web servers.

Virtualisation

Server virtualisation is the creation of virtual versions of your servers which are then run on just one single physical server. This act of consolidation can reduce hardware costs dramatically and means servers can be accessed by users in ways that are unrestricted by physical configuration or geographic location.

Cloud computing

This involves the use of a third-party platform (called a data centre), whereby the infrastructure is provided to you via an internet connection, on demand. There are various delivery models for cloud services: public, private and hybrid.

Public cloud

This option means your data would be stored at our state-of-the-art, maximum security data centre on hardware that is also tenanted by other companies. Your data is separated and protected from others' data by the tightest of security measures. This is the standard model for providing cloud services in the UK and comes with the utmost of managed security in place.

Private cloud

A private cloud means the infrastructure is not located in a multi-tenanted environment, like the public cloud. Instead it is a cloud dedicated to a single organisation with most of the hardware within the cloud owned by you. Internal policies, compliance, strict regulation or personal preference can all point towards a private cloud being the better option, typically for large organisations.

Hybrid cloud

Choosing a hybrid approach means you can have the best of both worlds. For instance, you could use a private cloud for most of your computing but in peak periods of activity when demand is increased you could move portions of your applications to a public cloud. Or you could use a public cloud for non-sensitive, public-facing operations and the private cloud for locating business-critical, sensitive data.

Don't just take our word for it...

“ I was very pleased to be offered the chance to visit OGL's data centre and see for myself exactly where our infrastructure would be hosted. It was exactly as OGL described; very high-tech, very secure and very well protected from threats such as fire and flood. ”

William Franklin, Partner and Chartered Accountant, Pett Franklin, Birmingham
